## **Juicing 101**

Fresh, natural, made to order juices are one of the healthiest things you can do for your body. Bottled/canned juices have lost much of their nutrition and all are cooked to preserve them and add to their shelf life.

One of the key benefits of fruits and vegetables are their natural enzymes which are destroyed during the "Cooking" stage. And, even if you are eating your fruits and veggies it is still more practical to juice them because one glass of our carrot/apple juice contains 4 carrots and 4 apples, more than the average person would care to eat.
